

TECHNICAL SERVICE BULLETIN

To: All Powerboss Dealers and Service Centers

From: PowerBoss Technical Support

Date: 5-14-19

Subject: TSB for ECN 150542- 10XT3DSL (All 10X units with Diesel engines)

Reason for Change

New emissions standards beginning January 2019 for U.S. domestic units.

Improvement

The original Kubota DSL engine V2203 (rated at 48.1 HP) will be replaced with the Kubota D1803 (rated at 49.6 HP) for domestic units only.

New engine is Tier 4 Final Compliant.

The software and diagnostic's connector/interface will be totally different than what is used on the current WG1605 LPG and GAS units.

You will need to contact your local Kubota dealer and register for the on-line access for the software and passwords for this engine. It's located in their K-ISS (Kubota Integrated Service System) service documents.

The V2203 will still be used in exported units only outside North America. If any specs changed, you should mention that.

Models/Serial Numbers Affected

SW10XDSL Beginning serial number 19PB****

Reference Kit Instructions – Kubota D1803 Diagnostic Tool (1J423-90011)

PowerBoss part number is: 650148
